The amendment received 4/1/05 has been entered and claims 39-46 are currently pending in this application. The amended title is acceptable.

Claims 39-46 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The application as originally filed does not enable the newly submitted claims which appear to be directed to an assay with some normalizer component. It would appear there is a chemical reaction cascade involved in the invention, but none is shown. Note in the specification on page 9 last full paragraph, such a method is not understood in context. On page 10 second paragraph last line, it is not seen CETP mass is measured. On page 11 last paragraph, AThe normalization factor includes a colorizing factor that reacts in response to the normalizing factor of choice.≡ The example on page 12 is insufficiently detailed to follow. No data of any sort nor results of any determination are found in the specification. As written, one of skill in this art could not perform the claimed invention by following the teachings of the specification.

Applicant's arguments filed 4/1/05 have been fully considered but they are not persuasive.

The Applicant argues that determining the level of CETP may be distorted by the concentration of LDL in the sample whereby a quencher reduces the emitted light proportion to CETP independent of the concentration of LDL.

It is the position of the examiner that the specification defines a problem to be solved but does not provide written description nor enablement for the solution to the problem. It would appear the point of novelty is the normalizer of claim 39(a)(ii) or the quencher of claim 44(a)(i). But what this substance may be has not been claimed or fairly taught by the specification as originally filed. No new matter may be added.

Claims 39-46 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Each of the following applies in all occurrences.

All the aspects of the claimed assay are described in functional terms where one would not know what compounds are intended. For example, in claim 39(a)(ii) the normalizer reads on water which is well known in this art.

The amendment of 4/1/05 does not address the above issue.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
